

Vado HD Pocket Cam Watermark Instructions

You must add the Vado HD watermark to your video before submitting it to the Creative Vado HD Momentum Film Contest. Following are some instructions using Final Cut Pro.

1. Go to **File > Import > Files**, then select the “vadohd_watermark.png”. You can download the file here:
http://www.vadofilmcontest.com/content/images/vadohd_watermark.zip

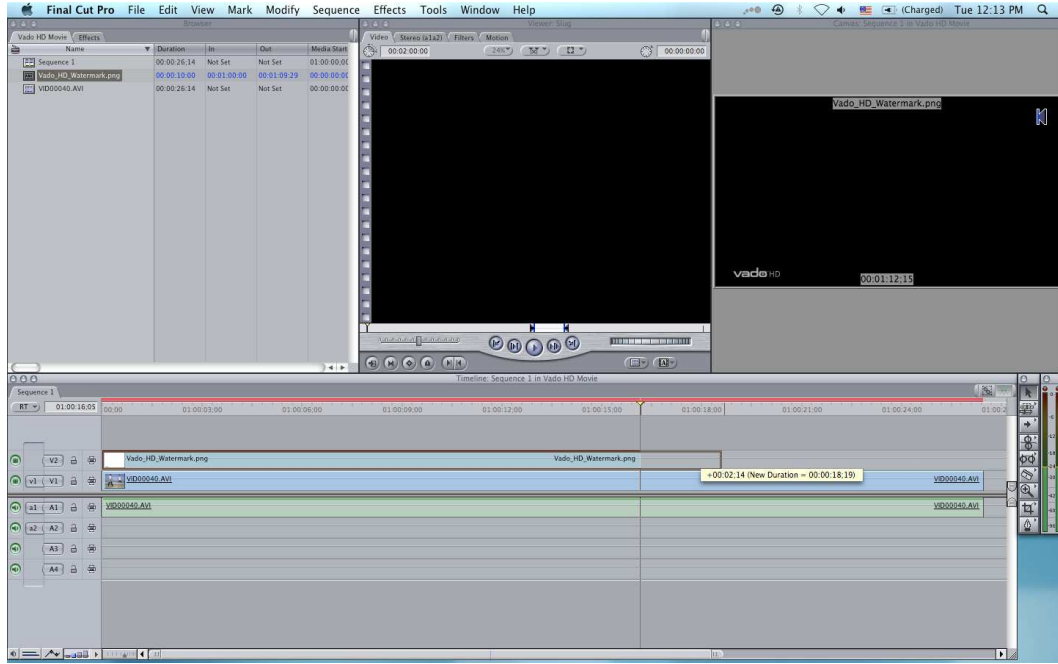

2. Drag the png image from your browser into your timeline, on top of you video clip.

Vado HD Pocket Cam Watermark Instructions

3. Click and drag the ends of the png image to stretch it across your entire timeline. If your video is longer than 2 minutes, (the maximum length you can stretch the file across the timeline), simply drag another copy of the png image into your timeline and stretch that one out to fill in the rest.

4. Go to **Sequence > Render All > Video** to render out the video for playback. You're all set!
